

🌟 My Journey at Infinity Soft Systems

🚀 How It All Began

In a competitive job market, I had **four offer letters** in hand. But I chose **Infinity Soft Systems**—inspired by the encouraging words and belief of **Megha** and **Henu Mam**. Their vision made an immediate impact on my decision.

Even before my official joining, I started contributing to the **Appifany project**—a reflection of my commitment and ownership from Day 1.

💻 The Lone Flutter Warrior

- Joined as the **only Flutter developer**.
 - Took full ownership of tasks, worked tirelessly, and delivered with quality and precision.
 - As a result, I was offered a **full-time role**, delivering consistently for **6–8 months** on key client projects.
 - Our performance led to increased trust from Appifany, which **expanded into a team of 5–10 developers** dedicated to their projects.
-

🤝 Building & Leading a Team

- Developers like **Nitin, Mohit, and Trapti** joined the Appifany team with limited experience in Flutter.
- I **mentored them**, helped set up their environments, and guided them to become productive Flutter developers.
- Naturally stepped into an **unofficial team lead role**—coordinating work, mentoring, and driving smooth delivery.

- With a stronger Flutter team, we secured more client projects like **JobWish**, which remains active and evolving.
-

Project Deliveries

(Client Satisfaction & Growth Through Flutter)

Delivered multiple **Flutter apps** on time and without **client escalations**, especially in the early phase.

Each delivery was marked by a strong focus on **timeliness, code quality, and satisfaction**.

☒ Key Projects I Delivered:

- Connectable App, Mental Floss, Your Fish, Artisian, Socialistic, Mind Reset, Cosmo, Become Secure (Pre-Launch), Goals FM, Artisan – New App UI, Check in Chick, ...and many more

Projects Handled by the Expanded Team (Under My Support & Collaboration):

- Become Secure, Good Sam, Agree Hive, Clear Sky (Phases), Take A Plate, Rentsy, JobWish

With growth came challenges—some **minor escalations** due to:

- Unclear initial requirements
- Workload pressure
- Limited resources or bandwidth

Despite these, I consistently stepped up to **support the team**, resolve issues, and maintain delivery quality.

Continuous Learning & Multi-Stack Contribution

To meet project demands, I upskilled in various areas beyond Flutter:

- **React Native** – Took responsibility and delivered features as required.
 - **iOS Development** – Contributed using **Swift** and **Objective-C**.
 - **AWS** – Managed basic configurations, integrations, and deployments.
 - **Django (Python)** – Learned backend development for API support.
-

App Publishing Expert

Owned the **entire release pipeline** for both **Google Play Store** and **Apple App Store**:

- Navigated **store policies and guideline changes**
 - Ensured **policy compliance**
 - Resolved **rejections** and ensured timely approvals
 - Acted as a **bridge between developers, QA, and project stakeholders** during releases
-

Reputation & Work Ethic

- Known across the team for **meeting timelines**, even under pressure.
 - Recognized for **self-initiative**, **mentoring juniors**, and **cross-functional support**.
 - Always ready to **learn**, **adapt**, and **deliver** with a solutions-oriented mindset.
-

Final Note

My journey at Infinity Soft Systems has been one of **trust, growth, ownership, and impact**.

From being the **solo Flutter developer** to becoming a **tech lead figure across multiple stacks**, I've:

- Delivered high-value projects
- Mentored upcoming developers
- Contributed to both **technical excellence** and **team success**

Milestones:

- 🎉 Completed **2 years** at Infinity
- 👥 Witnessed company growth to **120+ employees** in just **4 years**
- 👤 Positive experience in every aspect—**salary, management, leadership, and culture**

I look forward to continuing my journey, embracing new challenges, and delivering **innovative, client-focused solutions** with passion and purpose.

Thank you to my mentors, colleagues, and the leadership team.

Grateful to be part of the Infinity Soft Systems family.
